

PRECITEX
SOFT PLUS
COT WITH QUALITY EDGE

PRECITEX **SOFT PLUS** **COT WITH QUALITY EDGE**

PRECITEX SOFT PLUS is the latest performance and quality enhancing product designed to provide the special edge in yarn spinning due to its unique construction and compound.

Salient features

PRECITEX SOFT PLUS cots have a two layer construction strongly supported with an alu-core base. The soft inner layer offers additional cushioning leading to the following key benefits.

Quality PLUS

Enhanced resilience of the cot improves fiber handling properties and hence there is tangible and cutting edge difference in yarn quality.

Consistency PLUS

The ageing of the rubber compound is well controlled and hence the shore hardness remains nearly the same throughout the working life of the product. This leads to consistency of yarn quality over a long period of time.

Performance PLUS

Appropriate selection of outer layer of the cot with the right shore hardness prolongs the buffing interval leading to enhanced over-all productivity.

PRECITEX SOFT PLUS cots are available in shore hardness of 63^oA to 75^oA for conventional as well as Compact Spinning applications.
